
A Centre of Learning for Students and the Public

The Albertov Campus is more than a place for teaching and research. It is also a space where people come together, new ideas emerge and science becomes a natural part of everyday life. The new Biocentrum and Globcentrum buildings will provide facilities not only for students and academic staff, but also spaces that bring the university and the public together.

Facilities for Students

Biocentrum and Globcentrum will offer teaching laboratories, lecture halls, seminar rooms and other facilities that will enable students to engage directly with the scientific environment. The campus will also include spaces that support everyday university life, such as study rooms, cafés, a student club and informal meeting areas that encourage collaboration across disciplines.

A University Open to the Public

The new buildings and their surroundings will strengthen the connection between Charles University and the city. Biocentrum and Globcentrum will include exhibition spaces, libraries, lecture facilities and other venues for presenting

scientific findings and hosting educational and science outreach events. In this way, the Albertov Campus will become an even more integral part of the city's public life.
